

Monthly Expense and Budget Analyzer- Abstract

The **Monthly Expense and Budget Analyzer** is a project developed to help users manage their monthly income, expenses, and budget in a simple and organized way. Nowadays, managing personal money can be difficult for many people. Expenses are often recorded in notebooks, paper receipts, or unorganized spreadsheets. These methods take time and can lead to calculation errors. People may also find it difficult to understand where their money is being spent and how much money is left at the end of the month.

To solve these problems, a simple digital system is needed to keep all income and expense details in one place. The proposed system allows users to enter their monthly income, set a budget, and record their daily expenses. Expenses can be divided into different categories such as food, transportation, education, shopping, and entertainment. The system automatically calculates the total amount spent and the remaining budget, making it easier for users to keep track of their money. The system can also organize expenses into Needs, Wants, and Savings. This helps users understand their spending habits and identify unnecessary expenses. It can also help them plan their spending and savings more effectively.

The main purpose of this project is to reduce manual calculations, save time, and provide a clear view of monthly spending. In the future, the system can be improved by adding monthly reports, savings tracking, budget alerts, and expense charts. Overall, the Monthly Expense and Budget Analyzer provides a simple and useful solution for tracking expenses and managing a monthly budget effectively.
